

ABSTRACT TO THE DISCLOSURE

5 A device comprises interception means (2) capable, in
the case of transfer of data packets between at least two
remote terminals (Tij-k), via a communications network, of
intercepting at least certain of the control packets
during the transfer, and of determining amongst the
intercepted control packets those which are formatted
10 according to a chosen real-time data transfer control
protocol, and management means (3) capable of duplicating
at least part of each intercepted control packet, and of
generating data, representing the duplicated part,
intended to be communicated to control means (1) located
15 in a control application (S) of the network.
